## **QUIK-PAK ANNOUNCES INSTALLATION OF WAFER DICING SAW**

San Diego, CA, October 31, 2006 - Quik-Pak, a division of Delphon Industries and leader in quick-turn integrated circuit (IC) prototype packaging, has announced the installation of a new 200mm Disco Automatic Wafer Dicing Saw in its recently expanded facilities in San Diego. The new in-house capability complements Quik-Pak's existing rapid turn IC assembly service offerings, which include die bonding, gold ball wire bonding, remolding and marking/branding. Quik-Pak is also the largest supplier of open cavity plastic packages, which allow IC designers to insert new die in existing production packages for design verification, testing and customer samples.

"The addition of this top-of-the-line dicing equipment will allow Quik-Pak to further reduce prototype turn times for our customers – enabling us to receive a wafer in the morning and ship completely assembled components that same day," stated Quik-Pak General Manager, Steve Swendrowski.

The new dicing service can either be utilized as part of Quik-Pak's turn-key packaging and assembly process for fabless semiconductor companies or as a stand-alone service for customers with internal assembly capability.

**Background:**

Quik-Pak, a division of Delphon Industries, offers IC packages, assembly and prototype services. The company specializes in open-cavity plastic packages and assembly in 24 hours or less. A limitless array of open-cavity packages is available with no minimum quantity and can be provided as part of a turn-key assembly solution along with wafer dicing, die/wire bonding, remolding and marking/branding. Custom assembly services are also offered for ceramic packages, chip-on-board, stacked die, MEMS, etc. Quik-Pak's unique offerings deliver faster time to market and reduced prototype costs for new devices, while providing excellent flexibility, quality and customer service.
